Defination **: -** Online Bus Booking Management System

Abstract **: -**

Online Bus Booking Management System is a Web based application that works within a Centralized network. This project presents a review on the software program "Online Bus Booking Management System" as should be used in a bus transportation system, a facility which is used to Reserve seats and different types of route enquiries used on securing Quick reservations. OBBMS is built for managing and computerizing the traditional database, Ticket booking and tracking bus and travel made. It maintains all customer details, bus details, Reservation details. In addition, PHP Hypertext Preprocessor (PHP) Language was used for the front- end of the software while the back end was designed using MySQL. The software achieved is capable of improving the customer hand and relationship Management in ITC operations. It is recommended that despite the present functionality of the Designed software, an additional functionality such as the use of E-mail to send tickets should be implemented into the system.

Frontend **: -** HTML, CSS, BOOTSTRAP, JS, JQUERY;

Backend **: -** PHP, MYSQL;
